

Dynamic Protection For Your Network!

Tech Assist's **IM SecurityNET™** service lets you monitor, document and filter 100% of the IM conversations occurring on your network. With no hardware or software to install or maintain, **IM SecurityNET™** sets up in five minutes - you simply "set-and-forget". Our Global Gateway adds another full layer of protection to keep your servers clean - enhancing the overall value of your existing network infrastructure.

IM SecurityNET™

is part of the SecurityNet suite of network security managed services. Please call or visit our web-site for more information.

IM SecurityNET™

How The SecurityNET™ Global Gateway Works

Protocol Support

For the first time ever, without expensive new software or hardware, you can control your company's IM communications over the world's most popular IM applications including:

- **AIM** (AOL Instant Messenger)
- **Yahoo! Messenger**
- **Microsoft MSN Messenger**

User Access Control

rockinredhead1895@yahoo.com = Marge Anderson in Accounting

One of the most valuable features inside **IM SecurityNET™** is the ability to register users and match anonymous screen names to employee names and associated email addresses. This registration process enables all the additional Organization, Group and User-level functionality within the filter, such as: the ability to block access at user or group levels, restrict or un-restrict external IM,; send disclaimers as well as conversation monitoring and logging.

Content Filtering

Because IM is an immediate and informal means of communication, users tend to become less careful with the overall tone and context of their language. Corporations are at risk for employee dissemination of company secrets or proprietary information over IM. To solve this challenge, **IM SecurityNET™** can block specific words or phrases before they are sent over IM. It can also recognize words or phrases that are inappropriate in the workplace. Any combination of letters or numbers can be tracked and/or blocked.

File Transfer Blocking

Administrators can choose to have all files intended for transfer over IM blocked or choose to have files over a certain size blocked. **IM SecurityNET™** provides the ultimate in convenience and control for the administrator.

Reporting

Administrators using **IM SecurityNET™** can take advantage of predefined report templates in order to conduct network performance analysis, conduct searches on logged conversations, or review blocked and/or quarantined files. All reports are available by Organization, Group and Users as well as by Protocol and Time/Date.

Administrator-level IM Reports include:

- Traffic/Bandwidth
- File Transfers (Shows file download attempts)
- 30-day Conversation Log with Search Functionality

Also features:

- **Virus Scanning**
- **Custom Notifications**
- **Custom Disclaimers**
