

Surfwall

How much time and resources are wasted by your employees visiting undesirable or inappropriate websites during office hours?

Internet misuse has become an increasing problem in the workplace—it is clear that unlimited and uncontrolled Internet access provides an opportunity for distraction. Yet, despite the potential for misuse, employees still need Internet access.

The risks and losses involved with the misuse of internet access by employees are substantial to any company. They could be legally liable for explicit material being downloaded onto corporate machines using corporate resources on company time.

Omniquad Surfwall is a complete Internet monitoring and management solution. Its multiplatform architecture allows easy out of the box deployment in any environment from a small workgroup to an enterprise network.

Omniquad's cutting edge multi-tier technology is powered by industry's leading web site database based on 70 site categories and updated 24/7 by dedicated research staff.

Surfwall enables IT administrators to customize policies for each employee group. Policies can be set to allow or block access based on time based quota or deny access to individual categories by user, group or workstation.

Any platform, any time

Surfwall Enterprise

The Enterprise edition integrates a centrally managed, transparent client technology with each user desktop and laptop (web filter policies will be enforced even if users connect to the Internet from outside the office).

The Plug-in agent queries website categories on your local Surfwall Enterprise Server and enforces Internet rules directly on the user's desktop.

If the local server is unavailable, the client workstation can automatically switch to querying one of the Surfwall Master Servers online. This automatic fail-safe technology provides reliable filtering regardless of network size and user location.

Surfwall for Microsoft Internet Security and Acceleration Server® (ISA)

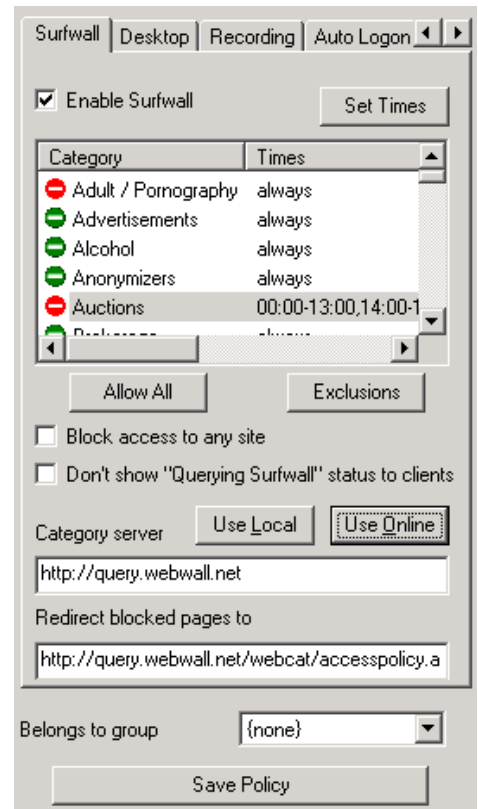

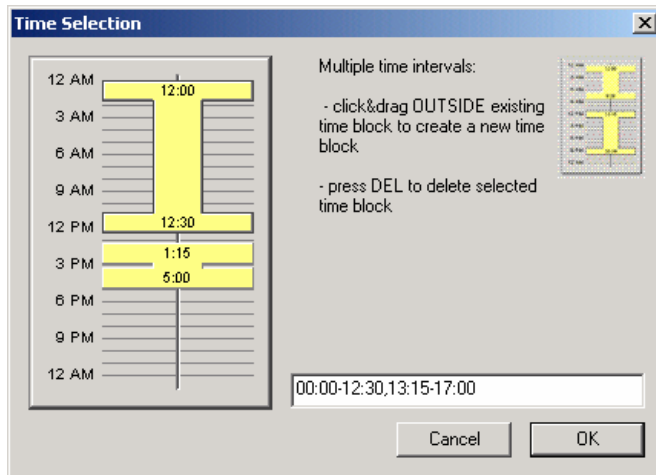

Integrated into Microsoft ISA, Surfwall can apply policies based on Active Directory® organizational units.

Surfwall Proxy

A stand-alone proxy software solution allows organizations of any size to channel all web surfing through one gateway.

Web site categories can be allowed/blocked with a single mouse click.

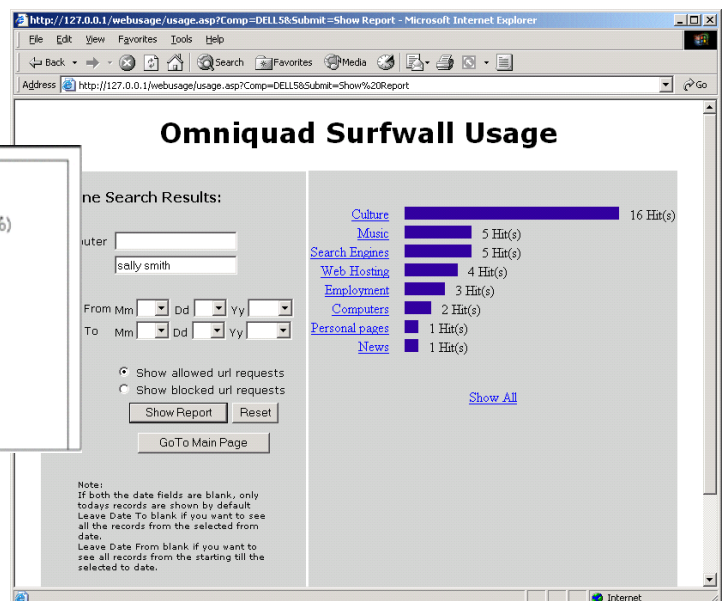

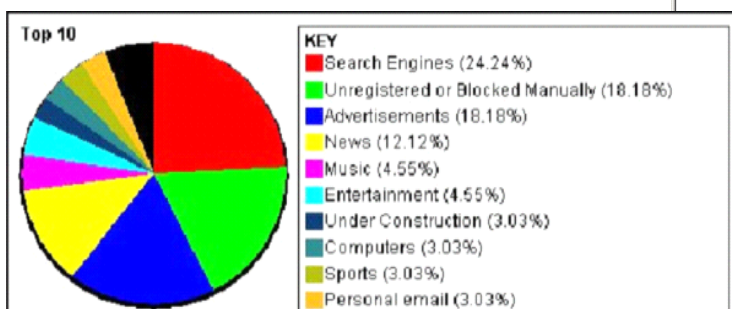

Surfwall **time management** controls allow you to fine-tune access policy where required— personal shopping sites may be for example allowed only during lunch time and after working hours

Detailed, drill-down web usage reports

Surfwall Reporter provides you with not just who-what-where logs but detailed web usage breakdown by site content category. The reports can be easily searched not just by user/computer but also by individual web site address.

Surfwall Reporter provides you with reports you need fast and efficiently.

Every organization that has adopted Omniquad Surfwall has seen the benefits of greater employee productivity and increased network efficiency.

As the possibilities of what anyone with uncontrolled web access can view are endless, it is imperative that an *Acceptable Internet Usage Policy (AIUP)* should be created for all staff with Internet connectivity. Employee policies provide the following benefits:

- Clarifies the organization's policy regarding use of the Internet.
- Shields the organization against potential liability.
- Avoids security threats by promoting awareness and good practice.
- Encourages effective and proper use of all resources.
- Provides employees with guidance and clear boundaries

Implement comprehensive policies

Omniquad Surfwall is the best of breed Employee Internet Management (EIM) solution that allows organizations to monitor, report and manage employee use of the Internet. With Surfwall, companies can be proactive and flexible with Internet usage management.

Minimise Internet misuse

Studies conducted by IDC show that 40% of web surfing is not business related and costs employers millions of dollars in lost productivity. Pornographic web sites, entertainment, sports, travelling are widely available on the Internet. With the Surfwall solution in place, non-business related surfing can be kept to a minimum and distractions removed from an employee's desktop.

Limit legal liability and protect business reputation

Employees today are accessing sites that promote pornography, hate groups and various forms of illegal activities. If this type of material is viewed by an offended member of staff, any of these activities could impose legal implications upon your company. Surfwall can filter and block these offensive sites, helping ensure a non-hostile working environment.

Preserve network bandwidth

By filtering out bandwidth intensive files such as banner advertising, streaming media, MP3 downloads and image downloads, Surfwall can help improve network performance for business applications. Surfwall protects against bandwidth eaters and can quickly help maximize your ROI made in network infrastructure and bandwidth.

Key features

- remote agent deployment
- central management from any workstation
- complete end user transparency
- virtually undetectable overhead in network traffic (less than 0.001%)
- runs on Windows 2000/2003 server or Microsoft Internet Security and Acceleration Server (MS ISA)
- client support for Windows 95/98/ME/2000/XP/2003
- complete active directory and cross-forest integration (MS ISA)
- industry's leading web site database with 70+ categories
- out-of-the-box policy presets
- 24/7 web site database updates by dedicated research team automatically streamed down to your local Surfwall server
- smart feedback connection from local server to the master category server requests any new site not in the database to be categorised
- fail-over web filtering settings with support for multiple servers—web policies will continue to work even if your local server is offline
- web filtering will continue to work when laptop users log on to the Internet on a dial-up connection / with different ISP
- 4-level web filter mechanism (category database non-keyword filter, url/site word keyword filter, page content filter and manual overrides)
- customizable blocking pages
- real time statistics
- per user / workstation /group policy management
- time bases quotas
- drill-down reporting
- real time support tool built into the administrator interface

Customer Testimonial

Since we implemented Surfwall we experienced a drastic reduction on surfing of non business related sites by employees. Productivity has increased by a measurable 15%. At the same time through Surfwall's Enterprise management and Enterprise Activity Monitor we were able to go back and trace files and folders deleted by a disgruntled employee and as such regain from our back ups. We produced evidence which helped us take court action against this employee. Surfwall goes further than simple web filtering and has become one of our most valued Internet policy enforcement tools. In terms of return of cost the increased productivity brought a return on cost within a few weeks.
